Accessibility Improvement Act - ToDos

1 Website Checklist – Customizable

Current situation (description of the risk, if applicable)	Current status	Note / recommendation from the data protection officer
HTML structural elements for headings are not available	Risk exists	Visually highlighted text is not sufficient to technically be recognized as a heading. Headings must also be marked as such in the code and should follow the correct order (no <h5> after an <h2>, etc.).
No HTML structural elements for lists available	Risk exists	We recommend marking lists as lists in HTML code. You need either a , , or <dl>, depending on the purpose of the list.
The structure of the content is not recognizable	Risk exists	The page currently uses a JavaScript-based display without any recognizable HTML structure. This cannot be recognized by screen readers.
The content is not marked as a data table, although it is presented in tabular form.	Risk exists	The data tables should be marked with the correct HTML elements so that they can also be understood by assistive technologies.
There is no programmatic assignment of data cells to headings because no real table is used	Risk exists	We recommend using <th> to mark table headers, and for more complex tables, also using the "scope" attribute.
There is no structural markup for layout tables	Risk exists	We do not recommend using HTML tables for the layout.
The website cannot be displayed horizontally and vertically in the app.	Risk exists	Due to the specifications, it is necessary to display the image horizontally and vertically
Bei der Eingabe persönlicher Daten sind die Felder nicht korrekt mit autocomplete versehen	Risk exists	When entering personal data, the fields are not correctly autocompleted **Eingabefeld** | **HTML-Beispiel** Vorname | <input type="text" autocomplete="given-name">

 When viewing the product range in the app, you must click on the heading because VoiceOver does not recognize the image.	Risk exists	To make it easier to use, we recommend displaying, for example, Feinkost and the corresponding image as one button.
	Risik exists	To make the buttons easier to recognize, we recommend the following adjustments: Add the note "Switch Branch" to the "Switch" button to more clearly identify its function. Add a brief description of the bell button's specific use to make the function clear at first glance. (***Max**:* we only implement this, if it can be done in background to help VoiceOver to describe the buttons; we are NOT adding a string below – that looks stupid!)

		For the back button, we recommend using a clear label such as "Back" or a similar phrase to facilitate navigation. (***Max**:* we only implement this, if it can be done in background to help VoiceOver to describe the buttons; we are NOT adding a string below – that looks stupid!)

2 Vorgaben BFSG

There is no privacy policy in the app	Risk exists	A privacy policy is required.
Add your own points for privacy policy, imprint and accessibility statement	Risk exists	Please add your own sections: privacy policy, legal information, and accessibility statement so that you can access them with one click. Placing the links under "About us" is not sufficient. (***Max**:* see my PPTs draft how me make these changes)
